Cover Letter: Senior AI Developer / Full-Stack Vibe Coder

XTRA Dubai 2026-11-08

Your posting says you care strictly about what a person can build, and that is the frame I want to be judged on. I work the way you describe vibe coding: AI-assisted, fast, and aimed at shipped products rather than unfinished experiments.

For 15+ years I have run enterprise technology in Dubai and Jeddah, currently as an IT Operations Engineer at myZoi Financial Inclusion Technologies, covering cloud SaaS stacks, identity automation, and deployments across AWS and Docker. Alongside the day job I run a local AI lab on my own hardware: Llama.cpp runtimes, RAG pipelines, multi-agent frameworks, and n8n automation wired into content engines that run unattended.

- **Local AI infrastructure, hardened and running,** deployed a dual-boot Ubuntu server with TPM-backed encryption and Secure Boot that hosts Llama.cpp runtimes and RAG pipelines on dedicated GPU hardware, with models sourced from the Hugging Face Hub.
- **Agents doing real work,** built automated AI content engines on the Hermes and OpenClaw agent frameworks with multiple n8n instances under Docker Compose.
- **AI tooling governed at enterprise scale,** administer Claude and Cursor AI access, licensing, and security compliance for a fintech company that ships AI-assisted work daily.
- **Media generation hands-on,** run ComfyUI workflows for image and video generation, including an LTX-Video pipeline on RTX 5060 Ti hardware.
- **Websites delivered end to end,** build client sites on WordPress and custom HTML, CSS, PHP, and JavaScript, and handle the domains, DNS records, SSL, and hosting myself, with a live portfolio at ibnjamaal.me.

XTRA runs a brand-led operation where landing pages, product content, and campaign automations need to ship at marketing speed. My opening move would be to map the manual workflows across your web and content stack, then ship one visible automation end to end in the first weeks: a scraper, a data pipeline, or an AI-assisted content workflow. From there I would take ownership of the landing pages, integrations, and the hosting layer so releases stop waiting on outside help.

I am based in Dubai, fluent in English and Arabic, with a 90-day notice period that can be discussed. I would welcome the chance to demo what I have built.
